

Technical Operations Center

Streaming Media Live is Proud to Announce Our Fully Built Technical Operations Center (TOC)

Streaming Media Live has the ability to ingest live feeds from Satellite, LiveU, SRT, and many other live feeds and redistribute/transmit to any destination.

That's right...From Anywhere to Everywhere!

Our TOC includes the following:

- Both C Band and Ku Band Satellites for uplink and downlink
- LiveU field encoders LU800 and LU4000 & LU2000 decoders
- Wowza servers and Wowza Clearcaster encoders
- Teradek Cube encoders and decoders

Our IP over Satellite Solution gives our customers the ability to have dedicated internet bandwidth in the middle of nowhere.

For those extreme remote locations, our facility carries dual Datum Satellite Modems with Carrier-in-Carrier—up to 64Qpsk and 100 Mbps data rate—and Novelsat NS3 Satellite Modems for backup. All on Gig Fiber with 4 Static IP Addresses and redundant Gig fiber backup and Starlink Failover.

Whether you need 10 Mbps for a Zoom Call, or 50-100 Mbps for a Live Stream, Streaming Media Live has the perfect solution at a affordable rate.
